how-to-create-a-link

Guide to create a link with our API

Actually, we don't expose our GraphQL endpoint for creating link. We are working hard to allow it. In the meantime, you can use this endpoint to do it.

Domain hi.switchy.io and swiy.io are only availables trought API for officials integrations.
If you want to make an official integration, feel free to reach us on our live chat. You can find our chat on the website or within the app! 😊

HTTP Request POST https://api.switchy.io/v1/links/create

Minimal curl example

```
curl 'https://api.switchy.io/v1/links/create' \
  -H 'Content-Type: application/json' \
  -H 'Api-Authorization: YOUR_TOKEN_HERE'
  -d \
  {
    "link": {
      "title": "",
      "description": "",
      "url": "https://example.com/",
      "pixels": [],
      "showGDPR": false,
      "extraOptionsLinkRotator": [],
      "extraOptionsGeolocations": [],
      "tags": []
    }
  }
  --compressed
```

More complex curl example

```
curl 'https://api.switchy.io/v1/links/create' \
  -H 'Content-Type: application/json' \
  -H 'Api-Authorization: YOUR_TOKEN_HERE'
  -d \
  {
    "link": {
      "title": "My title",
      "description": "My description",
      "url": "https://example.com/",
      "image": "https://example.com/my.jpg",
      "pixels": [
        {
          "createdAt": "2021-01-30T08:03:34.568+00:00",
          "id": "pixel id",
          "platform": "twitter",
          "title": "pixel title",
          "value": "tixel value",
          "workspaceId": 5972
        }
      ],
      "showGDPR": true,
      "extraOptionsGeolocations": [
        {
          "url": "https://github.com",
          "value": "AO"
        }
      ],
      "tags": [
        "mytag"
      ],
      "domain": "hi.swutchy.io",
      "id": "my-slug",
      "folderId": 10313,
      "favicon": "https://example.com/favicon_144x144.png",
      "linkExpiration": {
        "enable": true,
        "timezone": 4,
        "url": "http://google.com",
        "end": "2021-12-29T10:03:51.421Z"
      },
      "deepLinkingEnable": true,
```

```
      "note": "My Notes",
      "passwordProtect": {
        "enable": true,
        "password": "123"
      }
    }
  }
  --compressed
```

JSON Parameters

Parameter	Description	Type	Default value
link	Link to create for the redirection	Link	no default value
autofill	Server will add automatically open graph metadata	boolean	true

Link type

Parameter	Description	Type	Default value
url	**Mandatory** Url to redirect	String	
domain	**Mandatory** Domain name of the link	String	hi.switchy.io
id	Alias slug, it's the id of your link (domainName/id)	String	randomId()
---	---	---	---

Parameter	Description	Type	Default value
title	Used for the open graph title	String	null (can be autofill with the autofill parameter)
description	Used for the open graph description	String	null (can be autofill with the autofill parameter)
image	Used for the open graph description, must be an url	String	null (can be autofill with the autofill parameter)
--------	---------	---------	---------
favicon		String	null
extraOptionsGeolocations		jsonb	[]
extraOptionsLinkRotator		jsonb	[]
folderId		Int	null
pixels	Used for pixelling your short link and retargeting purpose	Pixel[]	[]
showGDPR	Display the GDPR popup if pixels are presents	Boolean	false
tags	Used for searching and sorting in the	String[]	[]

Parameter	Description	Type	Default value
	dahsboard		
note	Some notes visible in admin panel	String	null
deepLinkingEnable	Enable Deeplink if it is possible	Boolean	false
linkScripts	List of script wihch will be added to a link if linkScriptEnable is true	Int[]	null
linkScriptEnable	Enable linkScripts connected to a link	Boolean	false
masking	Enable link cloaking	Boolean	false
linkExpiration	Set up date then link will be expiried and redirect endpoint	LinkExpiration	null
passwordProtect	Show password protection popup	PasswordProtect	null

Pixel type

Parameter	Description	Type	Default value
platform	**Mandatory** Which platform belongs the pixel	Platform	
value	**Mandatory** Value of the pixel	String	
id	It's the id of your pixel in the database	UUID	randomId()

Parameter	Description	Type	Default value
workspaceId		integer	

LinkExpiration type

Parameter	Description	Type	Default value
enable	**Mandatory** Is link expiration enabled	Boolean	
end	**Mandatory** link exparation end date - exaxmple: 2021-11-11T06:59:01.499Z	String	
url	**Mandatory** Url the link will be redirected then link become expired	UUID	randomId()
timezone	**Mandatory** timezone	Int	

PasswordProtect type

Parameter	Description	Type	Default value
enable	**Mandatory** Is password protection enabled	Boolean	
password	**Mandatory** Password of protected link	String	

```
type Platform =
  | 'linkedin'
  | 'facebook'
  | 'gtm'
  | 'quora'
  | 'pinterest'
  | 'twitter'
  | 'ga'
```

```
    | 'bing'
    | 'nexus'
    | 'adroll'
    | 'adwords';
```

Rate limits: 10.000 links/day; 1.000 links/hour max. For any higher limits needs, please reach us on our chat.
